

## Archive One : Instant Messaging integration

**IM Compliance:** enforcing a retention.policy for Instant Messaging.

**Archive administration:** seamless integration and no compromise in IM management.

Archive One Policy and Compliance modules are now integrated with secure Instant Messaging applications from IMlogic. This integration allows Archive One customers to extend their compliance and archiving capabilities to include IM – managing both email and IM archive repositories via the Archive One administration-management console.

The IM traffic that can be monitored and captured includes AOL, MSN, Yahoo, IBM-Lotus, Microsoft, Reuters and others. For more information visit [www.imlogic.com](http://www.imlogic.com)

### What happens in the archive?

IMlogic has the ability to capture IM messages from various feeds and place the resulting conversations within a database. On a scheduled basis these conversations can be exported to an IM Journal mailbox. Archive One Policy and Compliance modules have the ability to transform the data from the IM mailbox, index and store the conversations within archive repositories. This seamless integration ensures the IM archives are configurable, secure and scalable in line with Archive One's proven email archival capabilities.

The Archive One administrator can search the IM archive and retrieve messages in the same way as email.

### Summary

1. IM feeds into the Archive One storage repository.
2. Archive One seamlessly handles data transformation.
3. Administrator can search and retrieve from IM archive.

### Archive One

Archive One modules are available for organizations that need to archive email for internal e-policy enforcement, regulatory compliance and capacity management. C2C's philosophy is to provide solutions that are easy to install and manage, use industry-standard, non-proprietary applications and hardware and that are scalable to suit organizations of thousands of users.
