FILE ATTENDER®

Network and User Hard Drive File Archiving

File Attender is a Domino-based file and Instant Messaging (IM) management product that can archive files from a user's hard drive, network drive or Domino server which includes files on any random access storage that the user or server can address (File server, WORM, SANS, NAS, JukeBox, etc.). It provides administrators the ability to centralize files and, when archiving from a user hard drive, perform back-ups on a scheduled basis. File Attender was designed to be as non-invasive as possible. It is a platform independent, Domino-based product that does not require any additional hardware or software.

File Attender can archive and manage:

- Files on User Hard Drives
- Files on Domino Servers
- Domino IM Logs
- Files on any Random Access Storage

Pricing starts at **\$5/user** with **Volume Discounts Available**

Features

Architecture

- Easy, non-intrusive Domino-based installation
- Installed from a single Notes client to all servers
- Server-based product - installed on Domino mail servers

Installation

- Runs on Domino 6.x, 6.5x, 7.x and 8.x for all OS platforms
- No Domino architectural changes required
- Uses LotusScript-based agents

General Features

- Archive files and instant messages to a centralized location while leaving behind a shortcut to locate/open the archived file
- Archive IM logs
- Collect a list of the files that exist
- Copy the files to another location (e.g. file server)
- Delete unnecessary files
- Move the files to another location (e.g. file server)
- Rename existing files
- Manage files based on content (e.g. keywords) when used in conjunction with Discovery Attender for Notes

Product Interface

In the example above, any file that has a .doc or .ppt extension, was last modified more than 90 days ago and exists on the hard drive for any user, will be archived to the 'f:' drive. You can specify files by their age, location, name and size. This allows administrators to create very granular rules for the entire set of users or for a specific subset of users.
